

This diagram shows the internal layout of the 19-inch rack. At the top, there are two power supply units (PSUs) with red status indicators. Below them is a central cooling unit with a fan and a multi-colored LED display. The rack is populated with two vertical server modules, each containing three green circuit boards. The bottom of the rack features a front panel with two large black doors and a central handle. The overall design is compact and efficient for space utilization.
